On Track	*Strong*	*On Track*

3 September 2026

Claude Skill and Plugin by Alex Labat

Executive Summary

This dev build (kd-plastering.netlify.app) is a genuinely strong, well-engineered pre-launch site — a 351-URL Astro build with real named-author E-E-A-T signals, verbatim customer reviews, real dated project photography, and hand-written neighbourhood-specific content across all 18 Bristol areas that most trade sites this size skip entirely. The most urgent issue is a data-accuracy one, not a structural one: five Bath location pages are currently publishing postcodes that belong to towns nowhere near Bath (BA22 for Bathwick, Widcombe and Odd Down; BA13 for Bath City Centre; BA12 for Newbridge), which is exactly the kind of NAP/local-SEO error that actively confuses both users and local search algorithms. A second, quick-fix layer of the same problem: several trust stats displayed sitewide ("290+ Verified Reviews", "800+ Projects Done") and a hardcoded "Twenty neighbourhoods" tagline don't match the site's own real numbers (23 areas covered, per the homepage's own separate stat). The biggest opportunity is AEO: the dedicated FAQ page is currently seven-eighths about rendering despite the company being named for plastering first, while genuinely strong plastering FAQ content already exists elsewhere on the site and just needs surfacing there too.

Dimension	Score	Status	Key Takeaway
SEO	**7/10**	On Track	Strong technical foundation undercut by live data-accuracy errors (postcodes, stats).
GEO	**8/10**	Strong	Named founder, real credentials, verbatim reviews, clear legal entity — strong E-E-A-T.
AEO	**6/10**	On Track	Good FAQ depth exists but is skewed away from plastering; schema could not be confirmed live.
Combined	21/30		

Pages Audited

URL	Page Type	Notes
/	Homepage	H1 is 100% rendering-focused; "290+ reviews" and "800+ projects"

		stats shown
/our-services/	Service hub	Clean structure, links to all 6 services and both cities
/our-services/plastering-services-bristol/	Flat service page	~2,200 words, 8 FAQs, pricing section not rendering
/our-services/plastering-services-bath/	Flat service page	Good Bath-specific framing (Georgian/lime), but not per-neighbourhood
/about-us/	About/E-E-A-T	Named founder, 3 certifications, founding year consistent (2014)
/our-work/	Gallery	18 real project photos, descriptive alt text
/faqs/	Site FAQ	8 questions, 7 of 8 about rendering; warranty claim wrong for plastering
/contact/	Contact/NAP	Full NAP present and consistent with footer
/bristol/	City hub	18 neighbourhoods listed correctly
/bristol/hanham/	Area hub (Bristol)	Rich unique content: housing stock, landmarks, transport, price data
/bath/	City hub	Postcodes shown are incorrect for all 5 areas (see findings)
/bath/bathwick/	Area hub (Bath)	Good local framing, but service links go to city-wide pages, not this area
/our-services/plastering-services-bristol/hanham/	Deep combo page	Genuinely unique local content confirmed; no pricing shown
/blog/	Blog index	3 posts, plastering + rendering topics
/blog/artex-ceilings-skim-or-overboard/	Blog post	Dated, authored by Kyran, ~650 words, well-structured
/robots.txt, /sitemap-index.xml, /sitemap-0.xml	Technical	351 URLs indexed; canonical points to production domain

SEO Analysis

Score: 7/10 — On Track

Technical On-Page

Signal	Finding	Status
Title tags	All fetched pages have unique, descriptive titles within 50-60 char range (e.g. "Plastering in Hanham BS15 | Airless Spray"). Consistent branded pattern.	**Good**
Meta descriptions	Present on every page, written per-page rather than templated, generally within 150-160 chars.	**Good**
Heading hierarchy	Single H1 per page confirmed on every template checked. H2/H3 logically nested.	**Good**
Homepage H1 topic match	H1 reads "We transform Bristol homes with a render that lasts 25 years" — entirely rendering-focused on a site named for plastering first.	**Needs Attention**
URL structure	Clean, keyword-rich, consistent pattern (/service-city/area/). No parameters or stop-word bloat.	**Good**
Canonical tags	Present sitewide, but point to the production domain (kdplasteringrenderingservices.co.uk) rather than this Netlify preview — correct for avoiding duplicate-content indexing of the dev build, but confirm this preview itself is not separately indexable.	**Good**
Robots meta / robots.txt	index,follow with max-snippet/max-image-preview set; robots.txt allows crawling and correctly blocks only /__forms.html.	**Good**
Open Graph / Twitter Card	og:title, og:description, og:image	**Good**

	and Twitter card tags all present and populated on homepage.	
Postcode accuracy (Bath)	Bathwick, Widcombe and Odd Down are shown against BA22 (a Yeovil postcode); Bath City Centre against BA13 (Westbury); Newbridge against BA12 (Warminster). None are real Bath postcodes (BA1/BA2).	**Missing**

Content Quality

Signal	Finding	Status
Word count	Plastering Bristol page runs approximately 2,100-2,400 words; blog posts average ~650 words — solid depth for service pages, adequate for blog.	**Good**
Local content depth (Bristol)	Deep pages (e.g. Hanham) carry genuinely unique housing-stock, landmark, transport and pricing detail, not templated filler.	**Good**
Local content depth (Bath)	Area hub pages have good local framing, but service pages from Bath areas all resolve to one generic Bath-wide URL rather than neighbourhood-specific pages.	**Needs Attention**
Content freshness signals	Blog posts carry visible publish dates (e.g. 28 August 2026) and author bylines.	**Good**
Sitewide stat accuracy	"290+ Verified Reviews" and "800+ Projects Done" do not trace to any source found on or off the site; "Twenty neighbourhoods" tagline is stale against the actual 23 areas covered.	**Missing**

Structured Data

Signal	Finding	Status
Schema presence	Could not be confirmed via automated fetch on this build — the fetch tool converts pages to text before analysis and reliably strips <script> tags, so this is a tool limitation, not a confirmed absence. Recommend checking directly with Google's Rich Results Test.	**Needs Attention**

GEO Analysis

Score: 8/10 — Strong

E-E-A-T Assessment

Signal	Finding	Status
Named author/founder	Kyran named as founder & lead installer on /about-us/ and as blog post byline, with NVQ Level 3 in Plastering plus Johnstone's, Parex and Weber certifications listed.	**Good**
About page depth	Explains who runs the business, its founding (2014), prior experience, and team structure.	**Good**
Contact information	Full NAP (8 Roman Way, Hanham, Bristol BS15 3FH; phone; WhatsApp; email) present and consistent between /contact/ and footer.	**Good**
Trust signals	Checkatrade (9.8) and Google (4.9) ratings, verbatim customer testimonials, and accreditation logos referenced on /about-us/.	**Good**
Legal entity clarity	Trading name explicitly linked to registered company ("KD	**Good**

	Plastering & Rendering Services, trading name of K D Plastering Services Ltd") on the contact page — strong entity clarity for AI engines.	

Content for AI Synthesis

Signal	Finding	Status
Factual density	Specific figures throughout: NVQ levels, manufacturer names, drying times, cost bands, dated blog posts — good citation material for AI synthesis.	Good
Clear value proposition	Hero and service pages state the offer plainly (free site visit, fixed written quote within 48 hours, named warranty period).	Good
Unverified factual claims	"800+ Projects Done" is a live, indexable claim with no supporting source — a factual claim an AI engine could cite and then have to retract is a real risk.	Needs Attention
Entity consistency	Business name, founder name and location are used consistently across every page checked.	Good

Technical GEO

Signal	Finding	Status
HTTPS	Netlify preview served over HTTPS.	Good
Crawlability	Server-rendered Astro output — no JavaScript-only rendering blocking AI crawlers observed.	Good
Social/sameAs signals	Facebook, Instagram,	Good

	Checkatrade and Google Business links present in the footer.	

AEO Analysis

Score: 6/10 — On Track

Featured Snippet Eligibility

Signal	Finding	Status
Direct-answer paragraphs	FAQ answers on both /faqs/ and the plastering service page are concise (2-4 sentences) and directly answer the question asked — good snippet shape.	Good
Definition patterns	Some present (e.g. plastering-vs-rendering distinction) but not consistently used to open every major section.	Needs Attention
List/table content	Bulleted "what we do" and process-step lists present on service pages; no comparison tables found on the pages crawled.	Needs Attention

Structured Answer Formats

Signal	Finding	Status
FAQ schema	FAQPage schema is implemented in the codebase for /faqs/, but could not be confirmed rendering live via automated fetch (see SEO/Structured Data note) — verify with Rich Results Test.	Needs Attention
Question-phrased headings	Inconsistent — some headings are natural questions ("What render system should I choose?"), others are	Needs Attention

	statements ("First: the asbestos question") that a voice query is less likely to match verbatim.	
Plastering coverage on main FAQ	Of 8 questions on /faqs/, 7 are about rendering/EWI; genuinely strong plastering FAQ content (drying times, Artex, damp, living in the house during work) exists on the plastering service page but isn't surfaced on the dedicated FAQ page at all.	**Missing**

Voice Search Readiness

Signal	Finding	Status
Conversational language	Blog posts in particular ("skim or overboard?", "the asbestos question nobody wants to ask") use natural, search-matching phrasing.	**Good**
Long-tail question coverage	Good coverage of specific how/what/can-you questions within service and blog content.	**Good**
Local signals	Strong for Bristol (postcode, transport, landmarks per area); undermined for Bath by the postcode errors above.	**Needs Attention**

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
Critical	Bath postcodes are wrong on all 5 area pages (BA22/BA13/BA12 instead of BA1/BA2)	SEO / Local	Low	High
Critical	"800+ Projects Done" stat has no supporting source anywhere found	SEO / GEO	Low	High

High	"290+ Verified Reviews" does not match any platform total found (Checkatrade 194, MyBuilder 51)	SEO / GEO	Low	High
High	"Twenty neighbourhoods" tagline is stale — site now covers 23 areas	SEO	Low	Medium
High	Main /faqs/ page is 7/8 rendering content despite plastering being the company's namesake service	AEO	Medium	High
Medium	Homepage H1 is entirely rendering-focused, with no plastering mention	SEO / AEO	Low	Medium
Medium	Bath area pages route every service click to a generic Bath-wide page, not the neighbourhood	SEO / AEO	High	Medium
Medium	Confirm JSON-LD schema is actually rendering on this live build (Rich Results Test)	SEO / AEO	Low	Medium
Quick Win	Standardise question-phrased headings across blog and FAQ content for voice/snippet match	AEO	Low	Medium

What's Working Well

✓ Named, credentialed founder (Kyran — NVQ Level 3, three manufacturer certifications) drives strong E-E-A-T across the site.

✓ 65 real, verbatim customer reviews sourced from Google and Checkatrade, scoped per-area and per-service rather than repeated.

✓ 18 real, individually-captioned project photos on /our-work/, with specific rather than generic alt text.

✓ 108 hand-written, genuinely differentiated local pages for Bristol's 18 neighbourhoods — housing stock, access, landmarks and pricing notes all vary by area.

✓ Clean, consistent URL structure and unique meta titles/descriptions across every page type checked.

✓ Dated, authored blog content with specific, non-generic answers (e.g. the asbestos question on Artex ceilings).

✓ Full, consistent NAP data and a clearly disclosed legal entity behind the trading name.

Glossary

SEO — Search Engine Optimization

The practice of making a site easier for traditional search engines (Google, Bing) to crawl, understand and rank well for relevant queries — covers technical setup, on-page content and structured data.

GEO — Generative Engine Optimization

Optimizing for AI-powered search and chat tools (ChatGPT Search, Perplexity, Google AI Overviews, Gemini) that synthesize answers from multiple sources. Rewards clear authorship, verifiable facts, and a well-defined brand entity.

AEO — Answer Engine Optimization

Optimizing content to be extracted as a direct answer — featured snippets, "People Also Ask" boxes, and voice assistant responses. Rewards concise, question-and-answer structured content.

A note on tool limits

Core Web Vitals, real-world page speed, and mobile rendering performance require a browser-based measurement tool rather than an HTML fetch — run this URL through Google PageSpeed Insights (pagespeed.web.dev) for those figures. JSON-LD schema presence could not be conclusively confirmed on this specific build via automated fetch, since the fetch pipeline converts pages to readable text before analysis and this process reliably strips script tags — verify directly with Google's Rich Results Test (search.google.com/test/rich-results) against the live URL.
